INDUSTRY

Security services

NEED

Enhanced security training
for internal teams

SOLUTION

Field Effect Cyber Range
platform.

INTRODUCTION

Managed security service providers (MSSPs) find themselves on the frontline of modern cybersecurity challenges—including the growing need for skilled cybersecurity talent. Because so many businesses outsource some or all aspects of their security operations to MSSPs, these providers need team members with the skills and technical knowledge needed to handle modern cyber threats.

The Industry

MSSPs are trusted security partners for businesses of all sizes, either augmenting existing security operations or helping organizations with limited resources access hard-to-find security expertise. The level of trust businesses have in their chosen MSSPs is such that these partners are often considered an extension of the organization they serve—yet this also means that a breach can have devastating consequences for the partnership.

The Challenge

The global cybersecurity skills shortage is a challenge for businesses everywhere, and MSSPs are no exception. In their role as the first line of defence for small and mid-size businesses (SMBs), MSSPs require top security talent—yet finding and retaining this talent is challenging in a highly competitive job market.

As such, numerous organizations are looking inward and investing in continued training and education for existing personnel—but this takes time, and frequently relies on existing talent to impart their knowledge. What’s more, organizing the real-time exercises required for teams to train together is tedious and reliant on specialized tools not every MSSP has access to.

FIELD EFFECT

The Solution

Field Effect Cyber Range gives MSSPs everywhere access to a platform that comes loaded with all the tools needed to deliver hands-on, experiential cybersecurity training and education. Using the extensive curriculum of pre-made content and scenarios, MSSPs can deliver realistic simulations that ensure staff get the opportunity to put their security skills to the test.

Because Cyber Range is browser-based, the only technology staff need is a laptop that can connect to the internet, letting them learn at their own pace whenever and wherever they want. Cyber Range also allows instructors to easily reset, reuse, and repeat exercises—or create their own on the fly—to ensure teams get the full experience.

The flexibility offered by Cyber Range gives MSSPs institutions an opportunity to build out their roster of cybersecurity professionals, ensuring they are ready to hit the ground running.

At a glance:

- ✓ Pre-built courses and custom content
- ✓ Preconfigured virtual machines
- ✓ Fully customizable to your client's needs
- ✓ Hands-on training based on real world events
- ✓ Deployable on-premises or via cloud hosting

About Field Effect

Field Effect believes that businesses of all sizes deserve powerful cybersecurity solutions to protect them.

Our threat monitoring, detection, and response platform, along with our training and compliance products and services are the result of years of research and development by the brightest talents in the cybersecurity industry. Our solutions are purpose-built for SMBs and deliver sophisticated, easy-to-use and manage technology with actionable insights to keep you safe from cyber threats.
